

INSTALLATION INSTRUCTION

Jeep Wrangler Headlamp replacement kit

1. Remove the original equipment headlamp assemblies per the factory service manual.
2. Using the supplied white grease apply a small amount to the factory female headlamp connectors.
3. Insert the supplied IPF loom adapters (these will only install 1 direction) into the Jeep harness.
4. Apply white grease to the female H4 type connector of the IPF adapter harness (headlamp connection side).
5. Plug the headlamp into the harness and insert the headlamp assembly into the Jeep light housing.
Note that the headlamp housings are indexed and the headlamps will fit only one way.
6. Reinstall the headlamp retaining rings and other removed items per the factory service manual.

Important Note:

Jeep JK's use a pulse width modulated control circuit for the headlamps. This type of circuit will not operate correctly with bulbs drawing greater than 55/60 watts and damage to the electrical system could occur if the headlamps are fitted with a higher wattage bulb.

NOTES

remove silver clip on three locating tabs for all but JK jeep
H4 TO H13 adapter loom only for use on JK jeep

Any issues please contact ARB 1 888 427 2872
