

JKS™

Installation Instructions

Product: Bar Pin Eliminators™

Part Number: PN 9603

Welcome

CONGRATULATIONS on your purchase of new JKS Bar Pin Eliminators! At JKS Manufacturing, we are committed to providing you with the best products available and your satisfaction is our first priority.

PLEASE READ these Installation Instructions carefully, and save them for future reference, as they contain important installation and maintenance information.

Important

NOT COMPATIBLE WITH Old Man Emu™ shock absorbers.

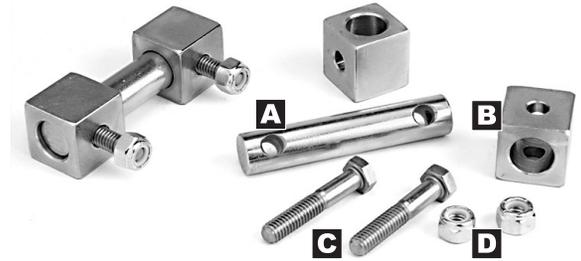

INSTALLATION OF BAR PIN ELIMINATORS effectively reduces the static length of shock absorber by 0.40".

Tools Required

- Metric/Standard Socket Wrench Set
- Torque Wrench
- Wheel Bearing Grease
- Bench Vice or C-Clamp
- Hammer and Punch *
- Sanding or Grinding Wheel *
- Factory Service Manual (recommended)

** Asterisk denotes tools that are not required for some applications. Thoroughly read instructions first to determine which tools will be required for your application.*

Parts

	DESCRIPTION	QTY
A	Cross Pin	2
B	Mounting Block	4
C	5/16" x 1-3/4" Bolt	4
D	5/16" Nylock Nut	4

Installation

❑ 1. REMOVE SHOCK ABSORBERS

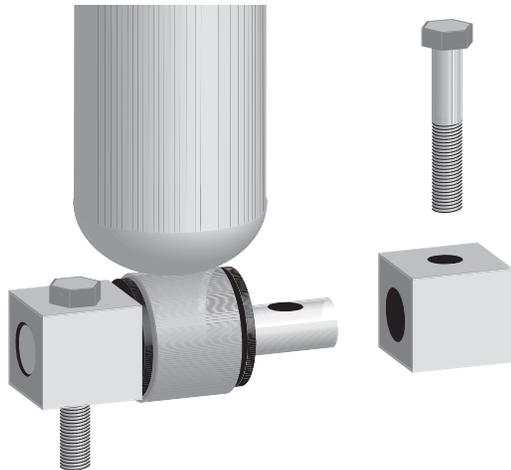

- Remove the front shock absorbers per factory service manual instructions for your vehicle.
- Remove the factory bar pin from the lower shock absorber bushing.

HINT: A hammer and punch may be useful for removing factory bar pin.

- Inspect the shock absorber bushings for wear and deterioration. If new bushings are needed, replace with standard 5/8" ID hourglass type bushings before installing Bar Pin Eliminators.

❑ 2. MOUNT BAR PIN ELIMINATOR TO SHOCK ABSORBER

- Apply a thin coating of wheel bearing grease to the 5/8" Cross Pin (A).
- Insert Cross Pin (A) through lower bushing of shock absorber.
- Slide a Mounting Block (B) onto one end of Cross Pin (A), align the mounting holes, and insert a 5/16" x 1-3/4" Bolt (C).

- Slide remaining Mounting Block (B) onto opposite end of Cross Pin (A).

This product is designed to preload the shock absorber bushings for maximum bushing performance and longevity. Therefore, you should find it necessary to compress the bushing approximately 1/16" to 1/8" before the mounting bolts and/or roll pins can be inserted.

IMPORTANT: If you are able to install the Bar Pin Eliminator without compressing the shock bushing, it will be necessary to install a SAE 5/8" flat washer (not supplied) between the bushing and Mounting Block to ensure proper bushing preload.

- Squeeze Mounting Blocks together to compress the shock absorber bushing until mounting holes align.

HINT: A bench vice or C-clamp is useful for compressing shock absorber bushing.

- Insert the remaining 5/16" x 1-3/4" Bolt (C) through mounting hole to secure Bar Pin Eliminator to shock absorber.

❑ 3. RE-INSTALL SHOCK ABSORBERS

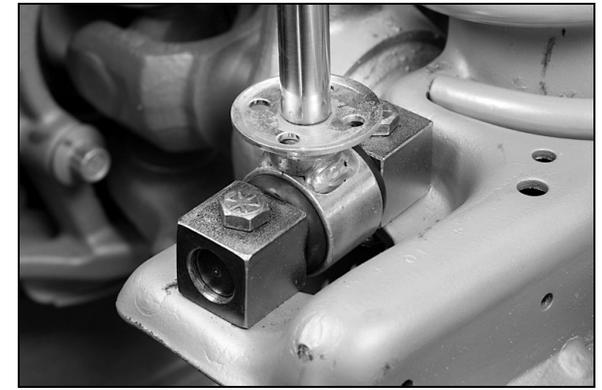

- Install shock absorber to upper mount per factory service manual instructions.
- Clean any dirt or debris from the lower shock absorber mounting surface on axle bracket.

HINT: A sanding or grinding wheel is useful for removing any stubborn material.

- Position Bar Pin Eliminator on mounting surface of axle bracket and guide the 5/16" x 1-3/4" Bolts (C) through original shock absorber mounting holes.

HINT: The Mounting Blocks (B) of Bar Pin Eliminator must lay completely flat against the mounting surface of axle bracket.

- Secure Bar Pin Eliminator to axle bracket by threading 5/16" Nylock Nuts (D) onto the 5/16" x 1-3/4" Bolts (C).
- Using a torque wrench, tighten the mounting hardware to 35-45 ft-lbs.
